Improvements

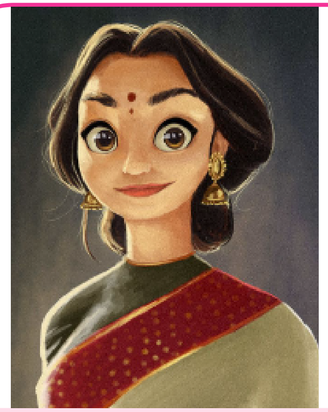
By Amrita

Meesho is a social commerce platform that undertakes retail distribution, enabling small retail merchants to connect and sell their products effectively via social media channels. It aims to create an environment where anyone can start their business with zero investment.

Reselling with Meesho: It is a way of running your own business with zero investment. As a Reseller, you share the products listed on the Meesho app either with your network or on social media and earn a profit with every sale.

Target customers: More than 70% of Meesho's customers come from Tier 2, 3+ cities.

Meesho's Unique Proposition: Associating with logistics networks that cover the entire country, offering reduced delivery charges, has been the method adapted by Meesho.This made the overall cost of a product cheaper than a product in a shop. The product cost in Meesho is normally below Rs 500.



Sunita, 32 Female Homemaker.

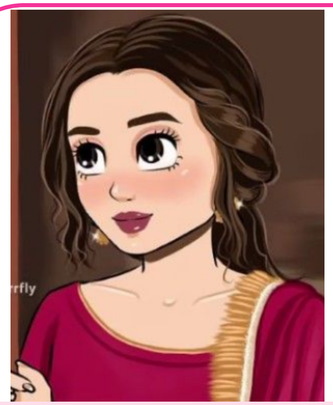
- lives in a small town in Andhra Pradesh.
- **Not a Tech Savvy.**
- Speaks telugu,can read english.

User Story:

" My husband work as a Police Constable. I have 2 kids. I spend most of the day at home taking care of my kid. I also loves decorating and organising my home. Few days back I came to know about meesho through my neighbour. Today I am ordering some home essentials and decor items from meesho for the first time."

Needs and Goals:

1. To buy **affordable and aesthetic** items for her home.
2. **Online shopping** with COD option.
3. To find **relevant products** easily.



Pooja, 25 Female School Teacher.

- lives in a small town in Punjab.
- **Not a frequent online shopper.**
- Speaks Punjabi, hindi and English.

User Story:

"I teach primary kids in a nearby school. My best friend is getting married next week. Since I have to buy many different items its hard for me to travel to the local stores all the time. While I was looking for an easy way to shop for my needs, i came to know about meesho in a youtube ad. Today I am ordering few clothes and accessories from meesho for the first time.

Needs and Goals:

1. To buy **good quality clothes** and accessories at an **affordable** price.
2. **Quick and Easy** online shopping.

meesho

ABOUT MEESHO | USER PERSONA | USER JOURNEY | IMPROVEMENTS

	OPENS THE APP	GOES TO PRODUCT	COMPARE THE PRODUCTS	SELECTS THE PRODUCTS	ORDERS THE PRODUCT
USER GOAL	• Buy a specific product. • check the latest products	• Discover new products • Find the specific products	• to check the features of the products.	• To buy the good quality products.	Place the order.
USER ACTION	1. Installs the app 2. Opens the App 3. Selects the language preference.and gender.	• browse through the offers • selects a category/brand displayed or directly Search for the desired product. • Filters for the desired products.	1. checks a product details and search for similar products.	• Goes through ratings, reviews. • compare the quality of different products	• Adds products to cart and check out.
USER EMOTION	**Excited!**	**Overwhelmed!**	**doubtful!** 	**curious!** 	**Happy!** Thoughts	“umm, I wonder why it doesn’t have other most spoken regional languages in the options”	• “ There are so many products!! I want to buy a good table lamp. searching product is not giving accurate results”	“I like this lamp!! but i am not sure if i should buy this...”	“ how can i know the quality of that bedsheet cloth before i buy it”	“I like the fact that we get the product for lesser price if we choose to return only if the items are defective/ wrong. and it has COD too”
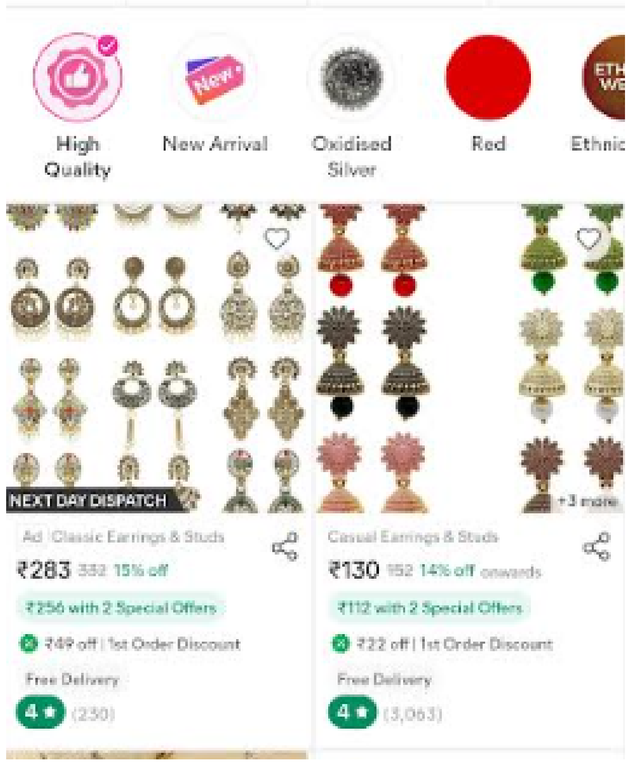
	“ I wonder why it doesn’t have “others” in gender specification”	“product discovery seems to be difficult here, Filters are not helping much”	“ I like the fact that similar products are displayed together, but some photos doesn't depicts the products clearly”	“these negative reviews are making me anxious”	1. “I like the fact that they don’t charge for delivering these products”

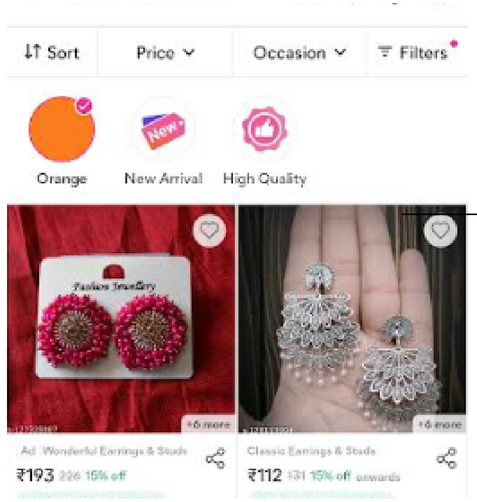
PROBLEM 1: **Users are finding it hard to find the desired products.**

- users have to rephrase the search terms when they are trying to find a specific products.
- Filtering the products with the different parameters is not helping.
- “high quality” filter fetches the products with good rating without considering the no.of ratings of the product.
- P1 is rated by only 230 ppl, P2 is rated by 3,063 ppl both has 4 star rating, none of them are “M trusted” .Only filter applied is “high quality”.But still P1 is displayed first.



P1

P2



“Results of the earrings when applied orange color filter”

- Even if that bundle of items has orange earrings that is not displayed as the main image.
- this leads to confusion and user keeps iterating the search process

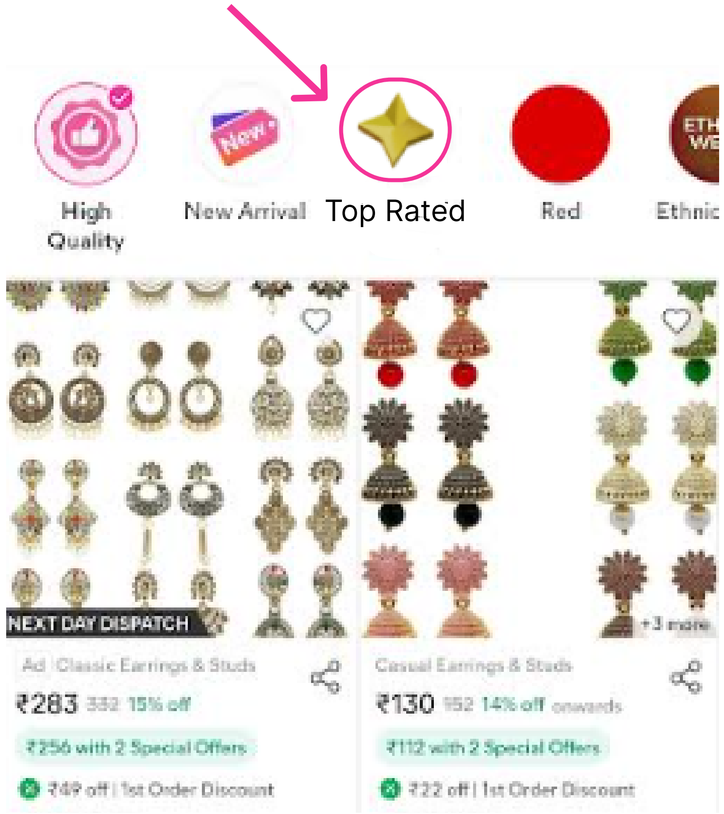
SOME SECONDARY RESEARCH: below are the reviews from the app store

use from past 3-4 months. The search option doesn't work. The back option doesn't work if you have applied any filter.

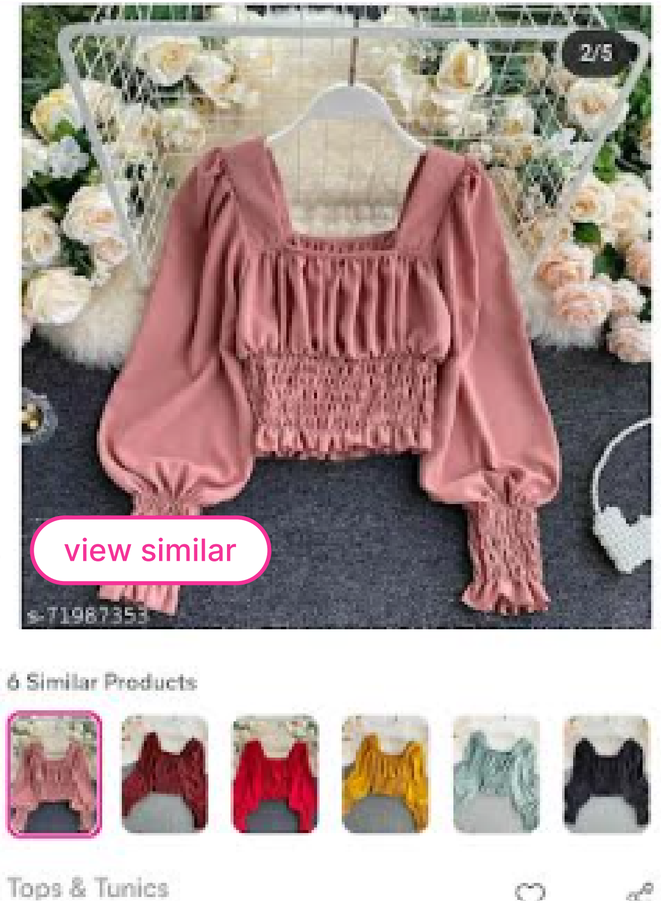
Nice Shopping 👉(❶❷❸❹❺❻❼❽❾❿)👈app. I know meesho is a great company and provide great deals for online purchases. After 5 to 6 tries you will find the product. It's really annoying and frustrating.

IDEAS:

- Adding **“view similar“** option which processes the image and Quickly shows the similar products from different sellers .
- Adding **“Top Rated”** filter in the frequent filters which fetches the products with good ratings if no.of ratings of the product is more than the average no.of ratings of the products in the same category.
- When filtered with a parameter, Displaying the right image from the bunch of products will improve overall user experience.



- Top rated filter will remove the discrepency between the quality of the products and the order at which the products are displayed
- while shopping in offline stores customers tend to check for different colors/model/material in the same products. They check 2-3 different shops before finalising thier purchase.
- With this option users can do it effortlessly.



Metrics Affected

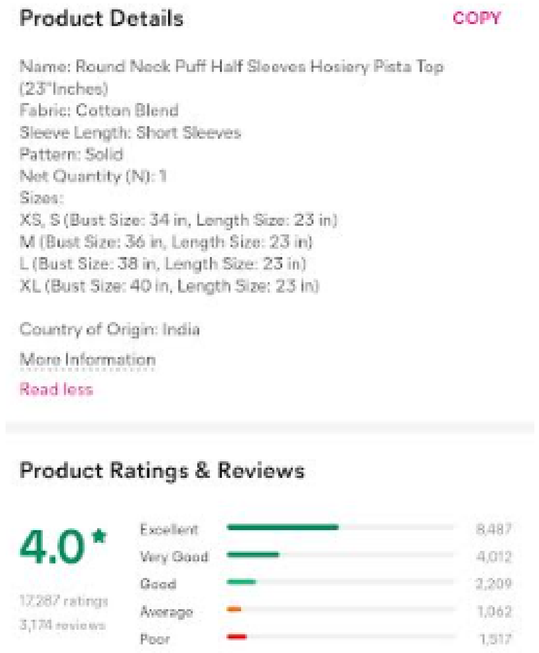
Time spent on search ▼

Search Repititions ▼

PROBLEM 2:

In most of the cases users are not happy with the quality of the product recieved because it doesn't look like what they expected it to be.

- Product reviews and images aren't trust worthy.
- there is an uncertainty in the authenticity of the products.



"Hard to distinguish between different colors "

- color names of the products are not mentioned for any products.
- this lack of clarity on the products that they are going to recieve creates chaos and frustration among users.
- In this first image the item color is blue and second image its black. Users will have to spend extra time to identify the colors when they are not mentioned.
- This applies to other items as well.

- Currently, Users don't have any additional information about the quality that they are going to recieve.

SOME SECONDARY RESEARCH: below are the reviews from the app store

Been shopping online for years now Total different product received. Very misleading images shown on the app

The product shown in images does'nt match in real. In images product looks good but when we received it ,its totally different .In many cases there is size issues even if you order the same size .Most of the times the colour was different .

IDEAS:

Adding **“Ratings by feature”** . Ratings for different features of the products.
Adding “**FAQ on product details**“ section.

Different customers have different expectations for the products. few just expect it to be durable, few just expect it to be aesthetic. few expect it to be both.

- Since most of the products are comparatively low in price here, Not all the products are expected to be of the best quality.
- With “rating by feature” users are clearly informed about the authenticity of different feautures of the products and their performance in real.
- While shopping in an offline store, Customers tends to ask a lot of questions about the product feautres.
- Answers for FAQ’s on the products details will certainly clear up the common apprehensions users have before deciding to purchase a product.
  Just like how it works in an offline store.
- With this users can give priority to different parameters before purchasing the products.
  This creates suitable expectations for the user.
- Thus increasing the User reliability.

Churn rate ▼

Order Return rate ▼

- adding **the color name** below the product image. (Tagging the color to individual item will eventually solves the filtering problem discussed in the problem 1 slide)
- This clears up the uncertainty of the products in users.
