PRODUCT TEARDOWN

Zepto

Product discovery, search experience & other improvements

About Zepto | Product Discovery | Search Experience | Other Improvements

By Amrita

Zepto is an online grocery delivery service that claims to deliver groceries to cusotmer's doorstep in less than 10 minutes.

How Does Zepto Work? Zepto has **dark stores** in high population clusters to reduce the delivery time taken by the executive to deliver the product. **Dark stores are primarily mini-warehouses** with a capacity to serve all the customers within a radius of 3kms.

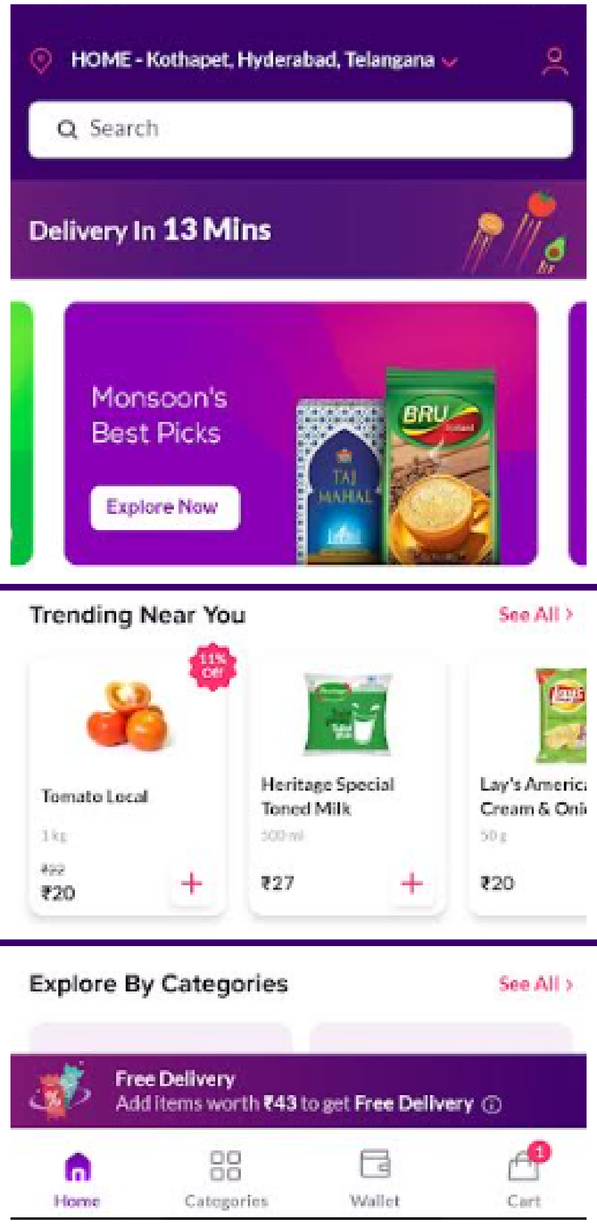

How does Zepto decides where to open a dark store? Zepto uses Locus an AI tool that uses the API of Google . It tracks the customer's geostatistical data, traffic dynamics, time taken for the last mile delivery. It displays all this pivotal data on the dashboard of Zepto. Accordingly, It decides whether to open a new Dark Store in that location or not.

- Zepto works in the **quick commerce** segment of India. It is built around the instant service model.
- Zepto reported a massive **946%** growth in users between December 2021 and March 2022
- Zepto is available in **10** cities. Delhi and Gurugram are the lead markets.
- It has **85+** dark stores across the country with **2,500+** goods.

Product Discovery

- This “Trending near you” section is placed at the **centre of the homepage** above all the other recommendations to draw User’s attention to the **high demand items** which they might need.
- There are also other personalized recommendation carousels based on users’ previous and real-time site interactions.
- without having to resort to search or attempting to find the products from category page users can also discovery products in the home page from these recommendations.
- This encourages impulse buying by **cross selling** these items which can increase the order value.

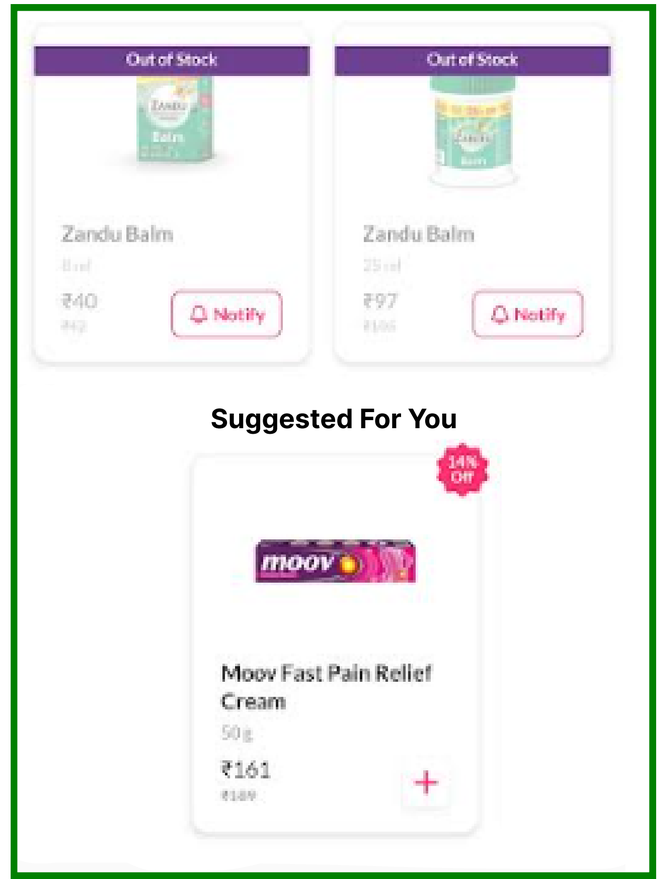

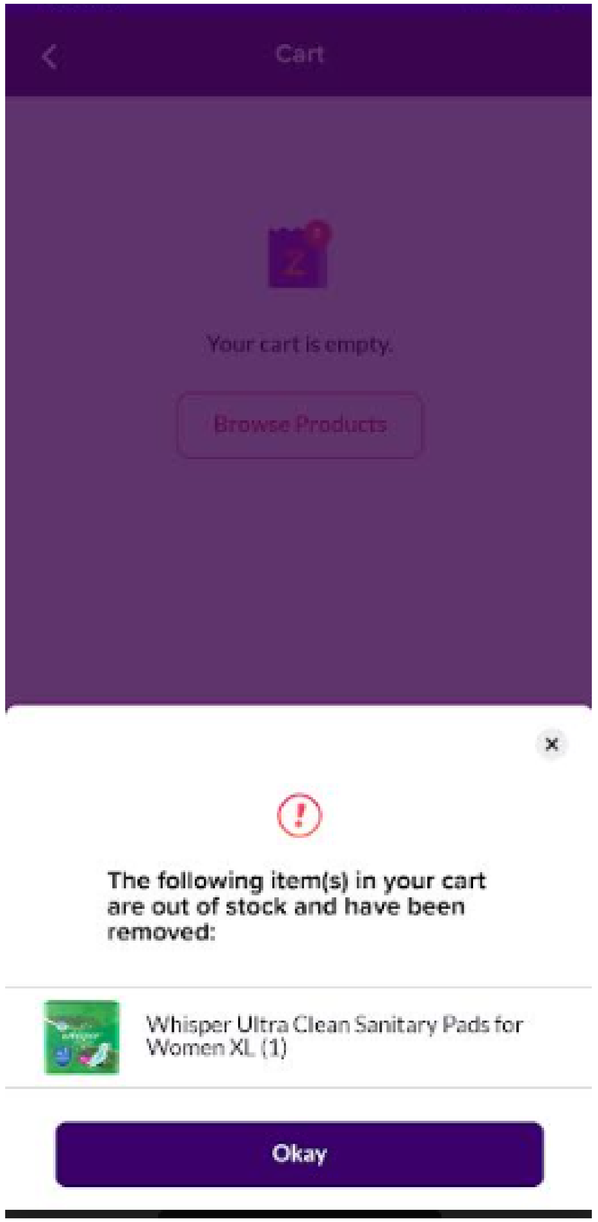

Search Experience

- **Multilingual regional search tags** are enabled to enhance search experience
- when user search for a **specific product that is out of stock,** right now it is a dead end.
- In this case, User will be inclined to visit the competitors' app to get what they need.
- Right now users can see similar products only when they land on the product page.
- But when the searched product is out of stock, users are most likely to drop without opening the product.

Improvement

- **recommending Top alternatives to the item that is out of stock** Can reduce this **drop rate** in the search stage of the funnel.
- this prime real estate can be used to make alternate product recommendations.
- If customers can find other products that meet their needs quickly and easily, they're far more likely **to push through with a purchase.**

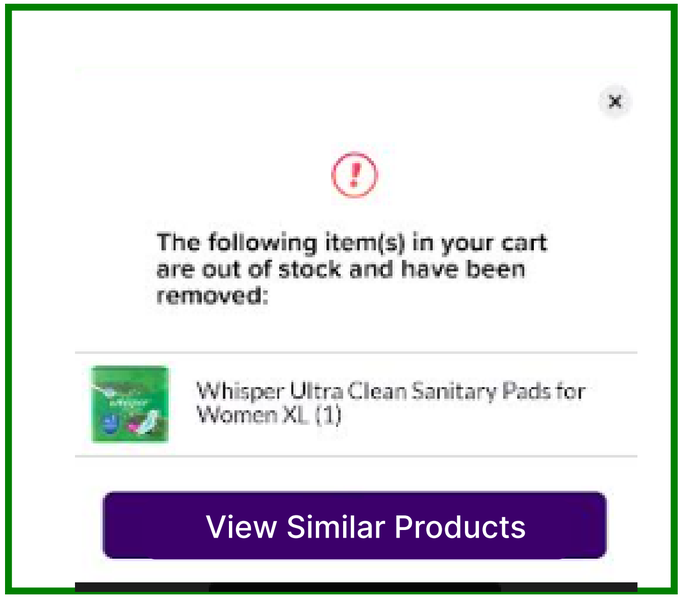

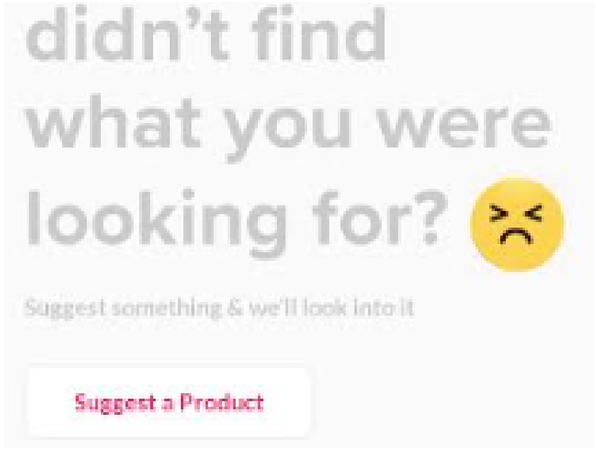

- When a product that is added to the cart is out of stock, right now users doesn't have any option except to go back.

Improvement

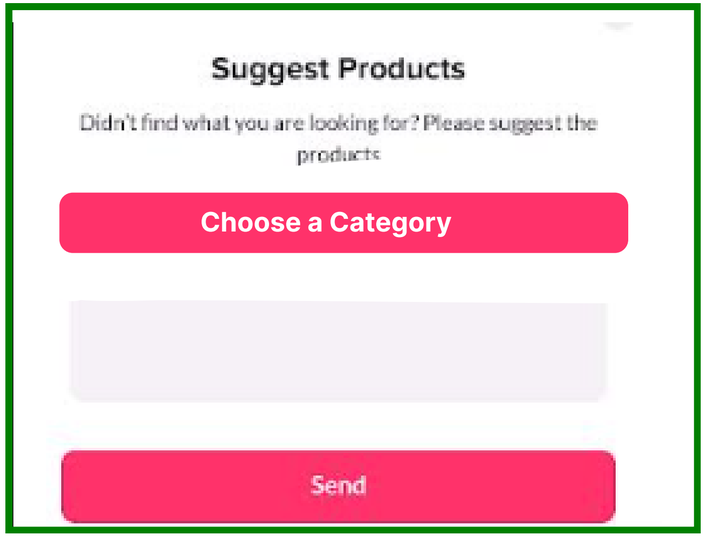

- Instead of okay button, **Adding a CTA to the sub category of the product** helps in improving the product discovery.
- Allowing users to easily navigate back to the product's category page, They are high chances that they discover an alternative product from the list.

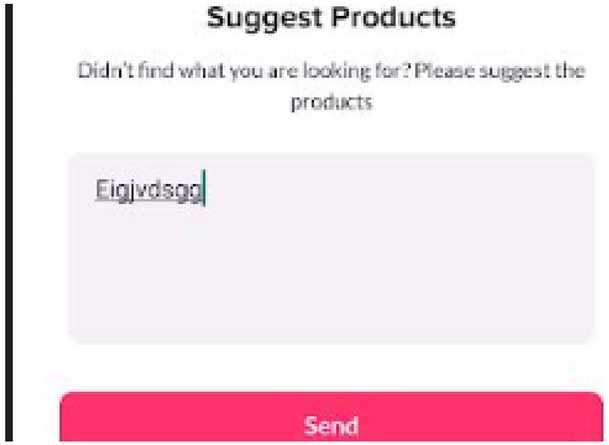

- replacing these dead ends with valuable detours is a way to hold Users' attention for much longer and to ensure that the user journey is not cut short prematurely.

- Users are asked to **suggest a product** if they didnt find what they were looking for.
- This section appears when user get **no results for the search query.** It is also present at the end of the home page

Improvement

- Right now this section has a plain text box for adding suggestion.
- Its good to have the user **select the category** of the product that they are suggesting by "**adding a dropdown of product categories**"
- This helps Zepto in improving their inventory and this category can be used to **improve the product recommendation** for the user.
